The Data

Participants provide the follow data points. Almost all of them have a dropdown list and the reporter simply chooses the correct answer. The following fields need to be completed on all reported events:

- Type of event (e.g. fall or medication event)
- Incident or near miss?
- Brief description of the event.
- Option to provide more resident information or information about the individual reporting the event
- Was any intervention made to rescue the resident?
- Identify the level of harm.
- Date of report
- Where did the event occur

- Who first reported the event or unsafe condition
- Optional text description of details discovered during investigation that might be helpful in prevention of future events.
- If the reported event was a near miss, what prevented it from reaching the resident?
- Was the event associated with a handover or handoff?
- Did you identify any contributing factors to the event?

Additional information for each type of event:

Data Reported for Falls With Injury	Data For Events with High Risk Drugs
- Was the fall assisted or unassisted? - Was the fall observed, and if so by whom? - Did the resident sustain an injury as a result of the fall, and if so, what type? - Prior to the fall, what was the resident trying to do? - Prior to the fall, was a risk assessment performed, and if so, was the resident determined to be at increased risk for a fall? - What risk factors were present? - What protocols were in place? - At the time of the fall, was the resident on medication known to increase the risk of fall, and if so, was the medication considered to have contributed to the fall? - Did Restraints, bedrails, or any other physical device contribute to the fall?	- What type of substance was involved? - Was the event a result of an incorrect action, an unsafe condition, or an adverse reaction in the resident? - What was the incorrect action? - At what stage in the process did the event originate, regardless of when it was discovered?
